CHUONG H. VO
San Jose, CA | P: (408) 391-6907 | vohoang2005@gmail.com

An accomplished IT Engineer with 10 years' experience transitioning over to Full Stack Developing. Recently Graduate from UC Berkeley Boot Camp with a passion for developing scalable web applications and working across the full stack.

PROJECTS

MAINTAINABLE:
- This is an application for use in recording the details and maintenance history of the air conditioning assets of an HVAC service provider. It has been developed using a MERN SPA framework and accordingly, utilizes a MongoDB database, Express, React and Node with GraphQL.
- You can view the App at: https://maintainable.herokuapp.com/

RANDM:
- RANDM is a dating application that helps users find matches through randomization. While other dating apps on the market focus too much on matches based on initial judgement, (such as profile pictures), with RANDM, people can start chatting with and getting to know potential dates without that initial judgement in an app free of profile pictures and "swiping".
- You can view the App at: https://ran-dm.herokuapp.com/

PORTFOLIO:
- You can learn more about me, my other Projects, by clicking on this link: https://vohoang2005.github.io/react_porfolio
